## SUMMARY

Software Engineer with 2+ years of production experience specializing in React.js, Next.js, TypeScript, performance optimization, SEO, and scalable frontend architecture. Proven impact including **25% memory reduction**, **45% listing performance gains**, and **3.5× PageSpeed improvements**.

## TECHNICAL SKILLS

**Frontend:** TypeScript, JavaScript, React.js, Next.js, Redux, TanStack Query, Tailwind CSS, Responsive Design, HTML/CSS

**Backend:** Node.js, Express.js, REST API Design, PostgreSQL

**Tools & Testing:** Git, Jest, React Testing Library, Core Web Vitals, SEO Optimization

## WORK EXPERIENCE

### Software Engineer

Jan 2024 – Present

*Concetto Labs*

- Build reusable Next.js + TypeScript components used across **3 client products** (Jobalots, EliteChem, BargainFox), reducing new feature development time by **30%** and ensuring design system consistency at scale.
- Engineered TanStack Query integration with automated cache invalidation and garbage collection for Jobalots, cutting client-side memory usage by **25%** and eliminating stale-data bugs on high-frequency listing pages.
- Improved organic search performance for Jobalots by implementing JSON-LD schema markup and dynamic category-based sitemaps in Next.js, reducing sitemap generation time by **70%** and expanding search indexing coverage.
- Optimized Core Web Vitals for EliteChem through Next.js Image optimization, lazy loading, and asset compression strategies, driving measurable improvements in page load speed and user retention.
- Boosted BargainFox product listing performance by **45%** through dynamic pagination, virtualized scrolling, and scroll-position restoration, directly reducing bounce rates on low-bandwidth mobile devices.
- Led end-to-end migration of production Fovero application from React to Next.js, increasing PageSpeed score from **22 to 85** via server-side rendering (SSR), aggressive code splitting, and image optimization.
- Delivered production application using Nuxt.js, Vue.js, TypeScript, and Pinia, implementing scalable state management patterns and reusable UI components that accelerated feature delivery timelines.

## PROJECTS

### FlowForge — Visual Workflow Builder

live | repo

*React.js, TypeScript, @xyflow/react, Zustand, Tailwind*

- Built a **100% client-side visual workflow builder** on an infinite canvas with 4 custom node types—webhook trigger, AI prompt transformer, conditional branch, and HTTP request—plus live configuration panels, payload inspector, and import/export.
- Engineered a browser-side execution engine with **DFS cycle prevention**, command-pattern undo/redo with coalescing and atomic delete-restore, and an event-driven async runner supporting branch routing, fail-fast execution, fan-out deduplication, and mid-run cancellation.
- Architected versioned **Zod validation**, debounced LocalStorage autosave, and memoized nodes/selectors to minimize sibling re-renders; added **78 Vitest unit/integration tests** covering DAG validation, execution, history, and persistence, gated by CI typecheck, build, and test.

## EDUCATION

### Saffrony Institute of Technology

2019 – 2023

*B. E. Computer Science — 7.39 CPI*

### M.G. School of Science, GSEB

2018 – 2019

*Higher Secondary (Class 12th) — 79.82 PR*

### Divine Life International School, GSEB

2016 – 2017

*Secondary (Class 10th) — 95.17 PR*
